

LOIC FERNANDEZ

Full-Stack Engineer - Go · TypeScript · React · GraphQL · LLM Systems

+33 6 74 31 24 37 · l.frz34@proton.me · github.com/Angfr95 · portfolio.ultizion.com

Full-Stack Engineer with a business background (double Master's in Audit & Management). Five years building e-commerce platforms, cloud infrastructure, and LLM-powered tooling across Go, TypeScript, and React. I use AI heavily to ship faster and tackle more complex problems.

TECHNICAL SKILLS

Languages	Go, TypeScript, JavaScript, Python, SQL
Backend	Node.js, NestJS, Express, Gin (Go), FastAPI, REST, gRPC, GraphQL
Frontend	React, Vite, Expo (React Native), Tailwind CSS, Zustand, react-i18next
LLM / AI	Anthropic API, OpenAI, OpenRouter, agentic pipelines, RAG, prompt engineering
Databases	PostgreSQL, Redis, ClickHouse, MongoDB
Messaging	BullMQ (prod), NATS JetStream (prod), RabbitMQ, Kafka
DevOps / Cloud	Docker, Kubernetes, GitHub Actions, GCP, AWS EC2, PM2, Nginx, Prometheus, Jaeger

PROFESSIONAL EXPERIENCE

Co-Founder & Lead Engineer · Freelance Software Engineer

2021 - Present

Ultizion - Production E-commerce Platform

ultizion.com · 2021 - Present | Node.js · TypeScript · PostgreSQL · Redis · BullMQ · Stripe · React · GraphQL · Docker · GitHub Actions

- Built a 14-module backend from scratch - data models, GraphQL/REST contracts, and async queue strategy - against a partner-defined roadmap and deadlines.
- Price-alert pipeline (Redis pub/sub + BullMQ) delivering updates under 60 min across 500+ SKUs, integration-tested with Vitest.
- Zero-downtime deployments via GitHub Actions + PM2 symlink swaps - 99.9% uptime in production.
- Multilingual React frontend (FR/EN, 27 pages) with sub-2s load times - from wireframes to production.
- Stripe payments, circuit-breaker (Opossum), and Redis-backed cart - full commerce stack in production.

AeroPath - Aviation Learning Platform

github.com/aeropath · 2024 - Present | Go · Gin · gRPC · PostgreSQL · Redis · NATS JetStream · ClickHouse · Kubernetes · Prometheus · Jaeger

- Built an event-driven Go backend solo - API Gateway + async Worker on NATS JetStream - with a spaced-repetition engine and real-time analytics.
- Four databases for four purposes: ClickHouse for 10M+ analytics events, NATS for async fan-out, Redis for caching, PostgreSQL for transactional data.
- Kubernetes cluster with HPA (3-10 API pods, 2-5 workers), StatefulSets, Ingress TLS - handles load spikes without manual intervention.
- Full observability stack: distributed tracing (Jaeger), metrics (Prometheus), internal gRPC + Protobuf contracts.

Full-Stack Software Engineer (Contractor)

FMR Boutique de Carte · 2021 - 2024 | Node.js · TypeScript · React · GitHub Actions

- Built Node.js automation scripts to sync inventory between the central database and marketplace endpoints (Amazon, eBay) - eliminated manual stock discrepancies.
- Wrote TypeScript jobs to fetch and parse daily product counts across platforms, keeping stock data consistent without manual intervention.
- Maintained the internal React merchant panel - bug fixes, layout updates, and product table improvements.
- Worked fully remote over 3 years: daily async communication via Slack, task tracking in Asana, hotfix deployments through GitHub Actions.

EDUCATION

Master's in Audit & Internal Control + Master's in Research & Management - University of Montpellier · 2019 - 2021
Erasmus Exchange - Ireland · 2018 - 2019 | English C1
